

Executive decision brief

Pilot 1 / Emerging neuropsychiatry opportunity intelligence

FULL 50-75 COMPANY PILOT

The point

Inflection Radar converts early external company signals into a source-linked portfolio of emerging neuropsychiatry opportunities Real Chemistry may want to understand

b**Will's model question**

The pilot uses a model-task portfolio, not one black-box model. AI assists bounded research tasks; humans own inclusion, interpretation, scoring and portfolio decisions.

nie**Will's data question**

Every source is classified by acquisition method, storage, transformation, model use, audience and retention. Public does not mean permissionless.

pro**Will's insight question**

Each dossier distinguishes fact, corroborated finding, inference and unresolved question. The score prioritizes review; it does not decide pursuit.

Pilot 1 output

50-75

COMPANY UNIVERSE

12-15

PRIORITY ACCOUNT PORTFOLIO

8

WEEK EXECUTION

0

INTERNAL SYSTEM DEPENDENCY

Deliverables

company universe, source register, signal taxonomy, scored portfolio, priority dossiers, rejected/deferred list, assumption register, evidence ledger and final recommendation.

Decision after Pilot 1

Real Chemistry can decide whether to calibrate the findings with internal context or institutionalize the method through ANATOMI, Analytics & Insights, CRM or another approved environment.

Implementation horizons

Pilot 1

Discover

independent external opportunity map

Calibration

Qualify

internal context and practice review

System

Institutionalize

recurring workflow and outcome learning

Pilot 1 starts now. Later horizons are optional and only follow demonstrated usefulness.

Decision requested

Approve Pilot 1 scope and identify the minimal inputs needed to make the external portfolio useful.

- Confirm therapeutic/geographic/stage scope.
- Identify intended internal reader.
- Share public-facing service priorities to map against.
- Name the success criteria for the 12-15-account portfolio.
- Hold ANATOMI/CRM integration for a later decision unless Real Chemistry wants it explored now.
